Our Reference : A8276139

Incident Date : 18 December 2025

Defendant : Kai Winters

Defendant VRN : KP55GHN

Defendant Ref : 4504205855

Claimant : Kathryn Mecklenburgh

Claimant VRN : RV71YKM

Claimant Ref : 568998

Dear Sirs

Please be advised we referred the engineers report for your clients vehicle to our engineer to review the costs. They have provided the following comments:

"On this one you have asked me to review and sign off the TPV repair cost presented by tp engineer. I have reviewed the case and I do not agree with the repair process or cost presented by them.

The repair chosen has parts being replaced and processes selected that I do not believe to be required, The report also has charges and rates that are excessive for the type of vehicle & repair required.

For this reason, I have compiled my own repair estimate on audatex, the report is on there for you to view.

The report created takes into account all damage supported by the engineer's report and the images they have provided. I believe it to be fair and acceptable for the

work required. The repair figure we need to settle at is £2,223.91 including vat.

Below are a list of items that require challenge and that I have not agreed to.

- 1) labour rate is excessive at £95.77. This is a standard car with a standard cosmetic repair.
- 2) tp engineer has included to replace the tailgate and then to repair the same tailgate as well. This is duplicate work and incorrect. The tailgate is repairable and I have added to repair on my report.
- 3) parking sensors and bumper brackets all added to the report for replacement but the sensors look undamaged and the bumper looks to sit perfectly as it should so all can be reused at this stage.

I can confirm that the TPV is roadworthy. The damage sustained to the rear end is minimal. The vehicle would pass an MOT with this damage; nothing makes it unsafe to drive."

As you can see our engineer is not in agreement with your report and therefore we are disputing the repair costs for your clients vehicle. Please refer our engineers comments back to your engineer to review and respond.

Yours faithfully
